Advanced Technology for Sandwich Panel Lines

It is a company that has years of experience in the field of insulating panel production equipment. It produces complete plants for sandwich panels production and provides assistance, retrofitting or upgrading of existing lines.

The machining is carried out with the latest equipment; design (with 3D programs) and electrical and software configuration (both for individual machines to complete lines) are made directly by our engineers.

It creates innovation by providing ergonomic and high performance systems, through an ongoing research and development

WHAT WE DO

We mainly realize equipment for the production of insulating polyurethane sandwich panels, mineral wool or polystyrene, normally covered with metal sheets.

We provide all necessary equipment for the production process: from the processing of metal sheets, to foaming, cutting, handling and packaging.

The lines (which may be continuous or discontinuous cycle) are handled with software developed internally and aimed at optimizing the production, with a focus on the ergonomics and the reduction of production waste.

FLEXIBILITY

OUR MACHINES

The construction of a plant involves careful planning, precision mechanical machining completely realized in house, very first quality components from leading companies in their respective sectors, software that bring out the best of the line features.

Before shipment, extensive tests are carried-out on every part of the plant to minimize testing time at the construction site.

The machinery set-up at the customer's site is under our responsibility; it includes the training of the staff in charge of the plant operation process.

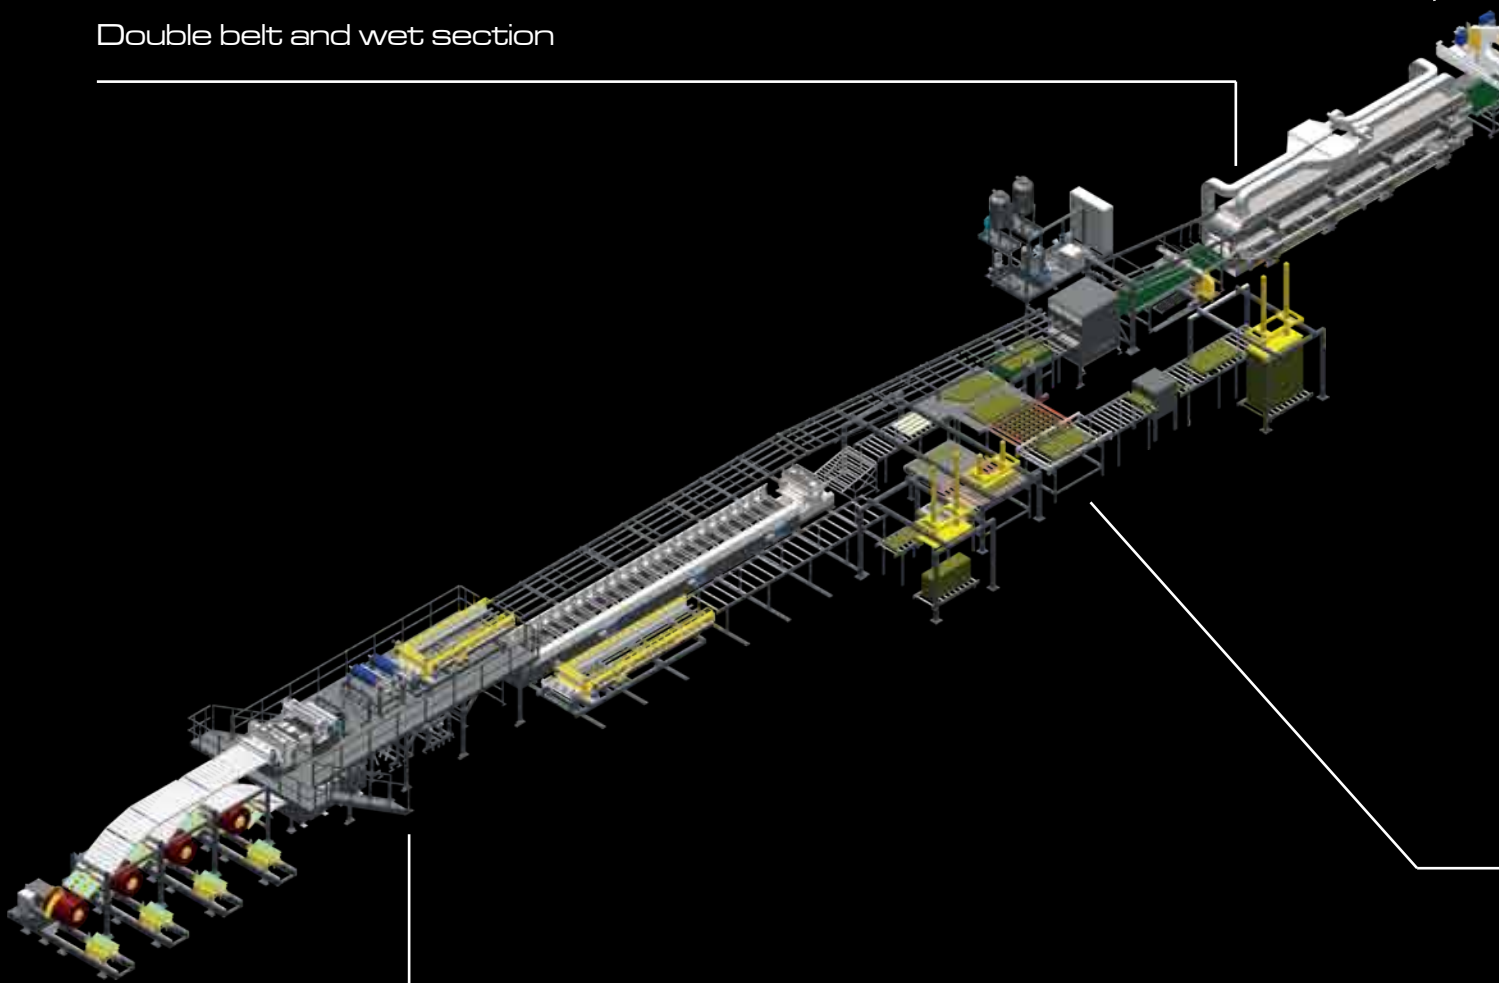

CONTINUOUS LINE FOR SANDWICH PANEL PRODUCTION

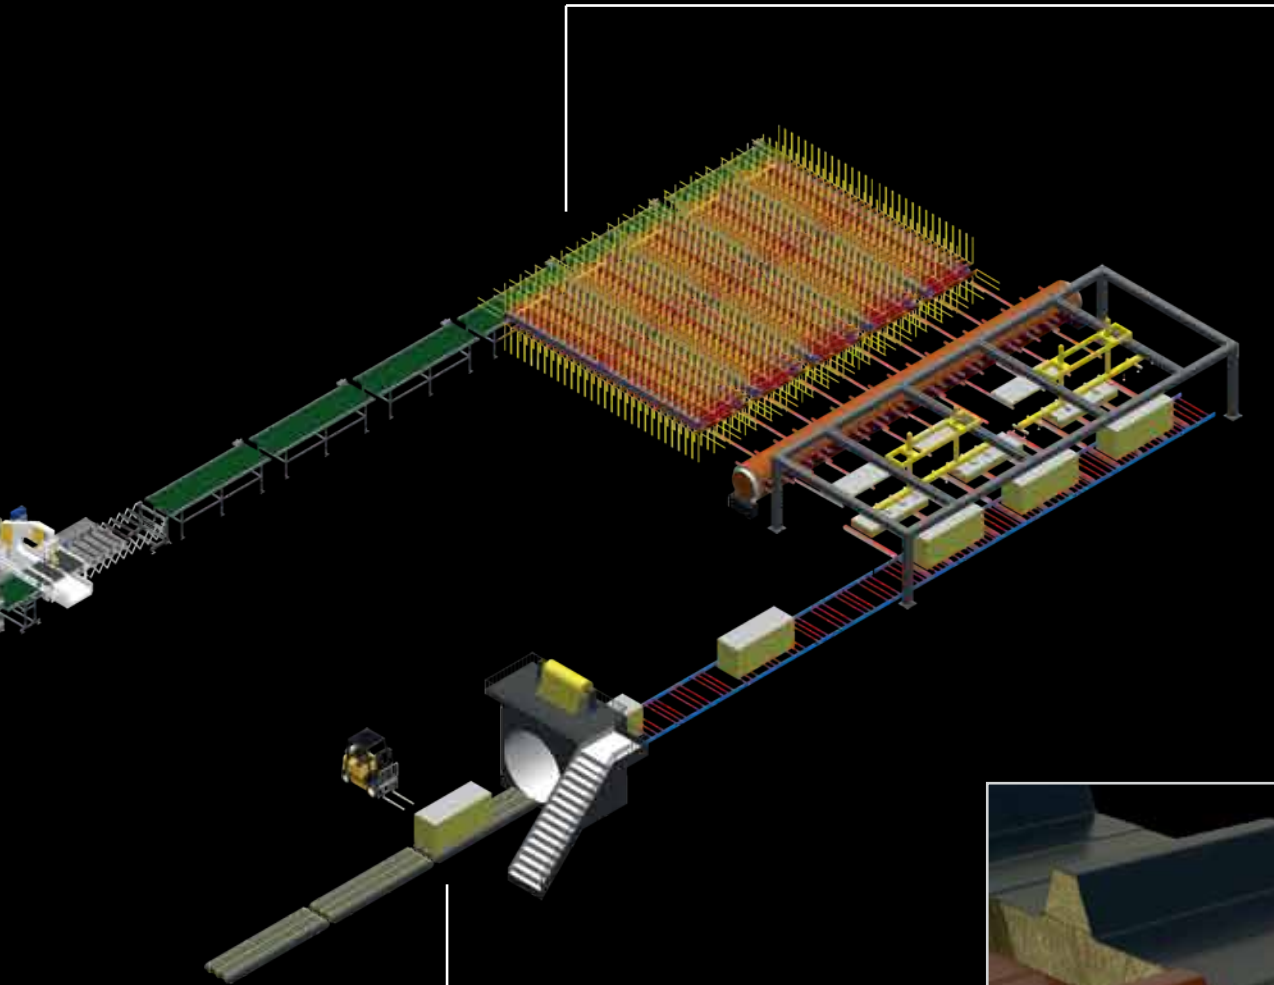

Cutting section

Double belt and wet section

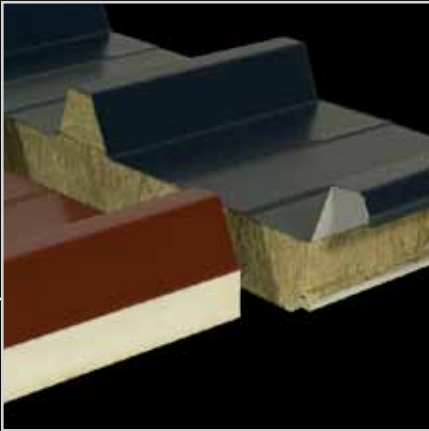

Metal sheet processing section

Panel handling and wrapping section

Sandwich panels

Mineral wool processing section

AFTER SALE

The company offers its customers full assistance including:

- spare parts supplying
- remote web assistance
- technical assistance at customer's site
- software updates
- line improvement and upgrade
